Executive Summary

iCoffeeHub.com is designed as a global digital destination where consumers can learn everything about coffee and order premium coffee from trusted providers around the world. The platform combines encyclopedia-grade content, seller storefronts, rich product data, AI recommendations, subscriptions, community features, and country/city-based delivery management.

- Core positioning: Wikipedia + Amazon + Vivino + TripAdvisor + MasterClass for coffee.
- Primary revenue: marketplace commission, seller subscriptions, premium customer memberships, courses, sponsored listings, affiliate equipment revenue and B2B sourcing.
- Launch strategy: start with high-quality content and curated premium sellers, then scale through SEO, local marketplaces, mobile app adoption and AI personalization.
- Account model: administrators, seller/provider accounts and customer accounts with clear onboarding and role-based permissions.

2. Company Overview

This chapter defines the company overview for iCoffeeHub.com. It explains why the topic matters, how it supports the global coffee hub strategy and which operating principles should guide product, content, technology and commercial execution.

- Create a premium, trustworthy and globally scalable platform experience.
- Combine structured data with human-friendly content and marketplace conversion flows.
- Use role-based access and strong moderation to protect quality and trust.
- Design each feature for internationalization, SEO, analytics and future AI personalization.
- Measure success with activation, conversion, retention, seller growth and content visibility metrics.

Strategic rationale

Strategic rationale for Company Overview should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Strategic rationale for Company Overview should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Strategic rationale for Company Overview should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Define ownership, workflow and approval rules.
- Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

Operational design

Operational design for Company Overview should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

3. Mission, Vision and Values

Mission

To connect coffee lovers, farmers, roasters, cafes and suppliers worldwide through knowledge, transparency and access to exceptional coffee.

Vision

To become the global destination for everything related to coffee, from bean to cup, combining education, discovery, premium commerce and community.

Values

- Quality First
- Transparency
- Sustainability
- Innovation
- Community
- Education
- Fair Trade
- Customer Experience
- Global Accessibility
- Trust

Strategic rationale

Strategic rationale for Mission, Vision and Values should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

7. Product Ecosystem

Pillar	Purpose	Business Impact
Coffee Encyclopedia	Educate users and capture organic traffic	Creates authority and SEO scale
Marketplace	Sell premium coffee and equipment	Generates transaction revenue
Seller Portal	Allow farms, roasters and providers to manage offers	Scales supply
AI Assistant	Recommend coffees, equipment and brewing fixes	Improves conversion and retention
Community	Reviews, collections and profiles	Builds network effects
Mobile App	Scanner, journal, brewing timer and offline recipes	Increases usage frequency

Strategic rationale

Strategic rationale for Product Ecosystem should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

Operational design

Operational design for Main Navigation and Site Structure should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Operational design for Main Navigation and Site Structure should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Operational design for Main Navigation and Site Structure should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Define ownership, workflow and approval rules.
- Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

Execution details

Execution details for Main Navigation and Site Structure should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Execution details for Main Navigation and Site Structure should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Execution details for Main Navigation and Site Structure should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Define ownership, workflow and approval rules.
- Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

9. Coffee Encyclopedia Strategy

This chapter defines the coffee encyclopedia strategy for iCoffeeHub.com. It explains why the topic matters, how it supports the global coffee hub strategy and which operating principles should guide product, content, technology and commercial execution.

- Create a premium, trustworthy and globally scalable platform experience.
- Combine structured data with human-friendly content and marketplace conversion flows.
- Use role-based access and strong moderation to protect quality and trust.
- Design each feature for internationalization, SEO, analytics and future AI personalization.
- Measure success with activation, conversion, retention, seller growth and content visibility metrics.

Strategic rationale

Strategic rationale for Coffee Encyclopedia Strategy should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Strategic rationale for Coffee Encyclopedia Strategy should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Strategic rationale for Coffee Encyclopedia Strategy should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Define ownership, workflow and approval rules.
- Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

Operational design

Operational design for Coffee Encyclopedia Strategy should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Prepare for multilingual and multi-country expansion from day one.

10. Coffee Bean Database Model

Each coffee receives a dedicated page with structured attributes and commerce links. Example pages include Brazil Santos, Ethiopia Yirgacheffe and Kenya AA.

Field	Description
Origin	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Region	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Altitude	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Processing	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Roast level	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Flavor wheel	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Aroma	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Acidity	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Sweetness	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Body	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Aftertaste	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Harvest season	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Producer	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Photos	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Brewing recommendations	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Food pairing	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Ratings	Displayed on every bean page and used for filters, AI recommendations and SEO schema.
Reviews	Displayed on every bean page and used for filters, AI recommendations and SEO schema.

Strategic rationale

Strategic rationale for Coffee Bean Database Model should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Strategic rationale for Coffee Bean Database Model should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a

clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Strategic rationale for Coffee Bean Database Model should be built around measurable business value. - Define ownership, workflow and approval rules.
- Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

11. Country and Region Database

Every producing country receives a dedicated hub page with history, regions, top farms, production, exports and best coffees. The target is 100+ producing countries and regions over time.

- Brazil
- Colombia
- Ethiopia
- Costa Rica
- Guatemala
- Panama
- Vietnam
- Indonesia
- India
- China
- Rwanda
- Uganda
- 80+ producing countries

Strategic rationale

Strategic rationale for Country and Region Database should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Strategic rationale for Country and Region Database should be built around measurable business value. - Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

Operational design

Operational design for Marketing and Go-to-Market should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Operational design for Marketing and Go-to-Market should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Operational design for Marketing and Go-to-Market should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Define ownership, workflow and approval rules.
- Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

Execution details

Execution details for Marketing and Go-to-Market should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

Execution details for Marketing and Go-to-Market should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

- Define ownership, workflow and approval rules.
- Create reusable templates and components for scale.
- Connect every workflow to analytics and operational KPIs.
- Prepare for multilingual and multi-country expansion from day one.

Execution details

Execution details for KPIs and Success Metrics should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

33. Appendices

This chapter defines the appendices for iCoffeeHub.com. It explains why the topic matters, how it supports the global coffee hub strategy and which operating principles should guide product, content, technology and commercial execution.

- Create a premium, trustworthy and globally scalable platform experience.
- Combine structured data with human-friendly content and marketplace conversion flows.
- Use role-based access and strong moderation to protect quality and trust.
- Design each feature for internationalization, SEO, analytics and future AI personalization.
- Measure success with activation, conversion, retention, seller growth and content visibility metrics.

Strategic rationale

Strategic rationale for Appendices should be built around measurable business value. The platform should prioritise premium coffee discovery, clean information architecture, consistent data standards, seller trust, customer convenience and repeat purchasing. In practice this means every page should have a clear user intent, every product should have rich structured attributes, and every seller should be verified before receiving full marketplace visibility.

iCoffeeHub.com

Logo Concepts, UI Kit, Typography, Colors, Imagery and Tone of Voice

Brand Book

Everything About Coffee. One Global Hub.

Table of Contents

1. Brand Strategy
2. Logo Concepts
3. Color Palette
4. Typography
5. UI Kit Principles
6. Tone of Voice
7. Imagery Guidelines

Brand Strategy

Brand name: iCoffeeHub.com

Tagline: Everything About Coffee. One Global Hub.

Positioning: global coffee encyclopedia, marketplace, AI assistant and community for premium coffee discovery.

Logo Concepts

Concept A: Cup + Globe

A minimal coffee cup icon where steam forms a globe line. Best for global marketplace identity.

Concept B: Bean + Compass

A coffee bean shaped like a compass needle, emphasizing discovery of origins.

Concept C: Letter i + Coffee Drop

Lowercase i with the dot as a coffee drop, clean for app icon and favicon.

Color Palette

Espresso Brown: #3E2723

Coffee Brown: #4E342E

Cream: #F5F5DC

Forest Green: #2E7D32

Gold: #C9A227

Charcoal: #212121

Typography

Headings: Poppins, Montserrat or Manrope.

Body: Inter, Open Sans or Source Sans 3.

Numerical dashboards: Inter Tight or Roboto Mono for clear figures.

UI Kit Principles

Rounded cards for products and sellers.

Large coffee photography with warm contrast.

Clear product filters by origin, roast, process, altitude, flavor and delivery area.

Trust badges for verified sellers, fresh roast date and sustainable sourcing.

Tone of Voice

Knowledgeable but friendly.

Premium but not arrogant.

Educational, transparent and practical.

Respectful toward producers and origin cultures.

Imagery Guidelines

Use real coffee farms, roasting, brewing and tasting photos.

Prefer warm natural light and authentic human scenes.

Show countries, maps and origin stories to reinforce global identity.

iCoffeeHub.com

Functional and Non-Functional Requirements

Software Requirements Specification

Everything About Coffee. One Global Hub.

Table of Contents

1. Scope
2. User Roles
3. Functional Requirements
4. Non-Functional Requirements
5. Acceptance Criteria

Scope

The SRS covers the customer website, seller portal, admin portal, content platform, marketplace checkout, delivery logic, AI assistant, reviews, subscriptions and mobile application.

User Roles

Admin

- Create admins
- Approve sellers
- Moderate products and reviews
- Manage content, orders, disputes and analytics

Seller

- Self-register via seller subdomain
- Manage profile, products, delivery areas, stock, orders and promotions

Customer

- Register, browse, order, review, subscribe and manage tasting history

Functional Requirements

Authentication

- Email/password, OAuth options, email verification, password reset, MFA for admins, role-based permissions.

Product Catalog

- Create coffee products with origin, farm, process, roast, variety, altitude, flavor wheel, stock, pricing and delivery zones.

Checkout

- Cart, delivery address, country/city availability, payment capture, order confirmation, invoices and refund flow.

Content Management

- Admin-managed encyclopedia, country pages, brewing guides, recipes, equipment reviews, news and SEO metadata.

Community

- Ratings, reviews, photos, collections, wishlists, questions and following roasters.

AI Assistant

- Personal taste quiz, product recommendations, brewing troubleshooting and equipment advice.

Non-Functional Requirements

Availability target: 99.9% for marketplace after launch.

Performance: product pages under 2 seconds for cached users.

Security: encryption in transit, secure password hashing, RBAC, audit logs and fraud monitoring.

Scalability: microservice-ready architecture, search index and CDN.

Localization: language, currency, units and address formats.

Acceptance Criteria

Every core workflow must have automated tests.

Seller registration requires validation and moderation state.

Products cannot be sold outside enabled delivery zones.

AI suggestions must clearly separate recommendation from factual database attributes.

iCoffeeHub.com

Microservices, APIs, Databases, Integrations and AI Components

System Architecture

Everything About Coffee. One Global Hub.

Table of Contents

1. Architecture Vision
2. Microservices
3. Integrations
4. Data Architecture
5. Security Architecture

Architecture Vision

A modular commerce/content platform with separate services for identity, catalog, orders, sellers, content, search, reviews, AI, payments and logistics.

Microservices

Identity Service

- Users, roles, permissions, MFA, sessions

Seller Service

- Company profiles, onboarding, verification, subscriptions

Catalog Service

- Products, beans, farms, countries, equipment, pricing

Order Service

- Cart, checkout, orders, refunds, invoices

Content Service

- CMS pages, guides, recipes, news, SEO templates

Search Service

- OpenSearch index, filters, autocomplete, faceting

AI Service

- Embeddings, recommendations, chat assistant, taste matching

Logistics Service

- Delivery zones, rates, carriers, tracking

Notification Service

- Email, SMS, push, in-app notifications

Integrations

Stripe/PayPal/local PSPs

Shipping aggregators and carrier APIs

Google Maps/OpenStreetMap

Email service provider

Analytics and event tracking

LLM provider and vector database

Data Architecture

PostgreSQL for transactional data.

OpenSearch for search and faceted browsing.

Redis for caching sessions, carts and hot filters.

Object storage for product photos, documents and media.

Event bus for order, seller and AI workflows.

Security Architecture

RBAC and least privilege.

Audit logs for admin and seller actions.

KYC/verification for sellers when required.

PCI-safe payment handling through PSPs.

Content moderation and anti-fraud signals.

iCoffeeHub.com

Commercial Model and Marketplace Governance

Marketplace Business Model

Everything About Coffee. One Global Hub.

Table of Contents

1. Marketplace Positioning
2. Seller Types
3. Revenue Streams
4. Trust Model
5. Unit Economics

Marketplace Positioning

Premium coffee marketplace focused on rich origin data, trusted providers and guided discovery.

Seller Types

Coffee farms

Roasters

Importers/exporters

Specialty coffee shops

Equipment vendors

Course providers

Revenue Streams

Commission per order

Seller monthly subscription

Featured listings

Advertising and sponsorships

Affiliate revenue on equipment

Coffee courses and certificates

B2B sourcing fees

Trust Model

Verified seller badges

Fresh roast date visibility

Transparent shipping countries

Ratings and reviews

Dispute resolution

Quality policy and delisting rules

Unit Economics

Average order value grows through subscriptions, bundles and equipment add-ons.

Contribution margin depends on commission, payment fees, customer acquisition cost and support cost.

Marketplace liquidity depends on strong seller onboarding and content-driven demand.

iCoffeeHub.com

Database Schema and ERD Specification

Database Schema 150+ Entities

Everything About Coffee. One Global Hub.

Table of Contents

1. ERD Overview
2. Entity Catalogue
3. Relationship Groups
4. Implementation Notes

ERD Overview

The database is designed as a modular schema grouped by domains: identity, sellers, catalog, content, marketplace, community, subscriptions, logistics, AI, analytics and administration.

Entity Catalogue

#	Entity	Domain	Main Fields	Relationships
1	User	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
2	Role	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
3	Permission	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
4	AdminProfile	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
5	CustomerProfile	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
6	SellerProfile	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
7	SellerCompany	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
8	SellerVerification	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
9	SellerDocument	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
10	Address	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
11	Country	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
12	Region	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions

				junctions
13	City	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
14	DeliveryArea	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
15	Currency	Core entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions

135	AttributeLookup19	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
136	AttributeLookup20	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
137	AttributeLookup21	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
138	AttributeLookup22	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
139	AttributeLookup23	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
140	AttributeLookup24	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions

141	AttributeLookup25	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
142	AttributeLookup26	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
143	AttributeLookup27	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
144	AttributeLookup28	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
145	AttributeLookup29	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
146	AttributeLookup30	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
147	AttributeLookup31	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
148	AttributeLookup32	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
149	AttributeLookup33	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
150	AttributeLookup34	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
151	AttributeLookup35	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
152	AttributeLookup36	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
153	AttributeLookup37	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
154	AttributeLookup38	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
155	AttributeLookup39	Lookup/support	id, created_at,	Related through

		entity	updated_at, status	foreign keys and many-to-many junctions
156	AttributeLookup40	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
157	AttributeLookup41	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
158	AttributeLookup42	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
159	AttributeLookup43	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
160	AttributeLookup44	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
161	AttributeLookup45	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
162	AttributeLookup46	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
163	AttributeLookup47	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
164	AttributeLookup48	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions
165	AttributeLookup49	Lookup/support entity	id, created_at, updated_at, status	Related through foreign keys and many-to-many junctions

Relationship Groups

- User -> roles/permissions/profile/orders/reviews/taste profile
- SellerCompany -> products/orders/payouts/documents/delivery zones
- CoffeeBean -> origin/farm/variety/process/flavor notes/product variants
- Product -> inventory/prices/photos/delivery zones/order items
- Order -> payment/shipment/invoice/refund/dispute
- Content -> translations/SEO/sitemap/redirects
- AIConversation -> messages/recommendations/vector embeddings

Implementation Notes

- Use UUID primary keys for distributed safety.
- Use normalized lookup tables for flavor, process, roast and country attributes.
- Use JSONB for flexible seller documents and AI metadata only where schema flexibility is necessary.
- Maintain audit logs for administrative, seller and financial actions.

iCoffeeHub.com - User Stories & Product Backlog

600-story implementation backlog covering the global coffee knowledge, marketplace, seller, AI, mobile, SEO and operations ecosystem.

Metric	Value
Total user stories	600
MVP stories	180
Phase 2 stories	180
Phase 3 stories	140
Phase 4 stories	100
Core account types	Admin, Seller/Provider, Customer
Main product pillars	Encyclopedia, Marketplace, Seller Portal, AI, Mobile, SEO

Detailed Product Backlog

ID	Epic	Role	User Story	Acceptance Criteria	Priority	Status	MVP Phase	Estimate Points	Dependencies
ST-0001	Accounts	Customer	As a Customer, I want to register as a customer so that I can start ordering premium coffee securely.	Given required data is valid, when the user performs 'register as a customer', then the system must create an account and verify email; audit/logging and localized error messages are required.	Critical	Backlog	MVP	3	
ST-0002	Accounts	Seller	As a Seller, I want to register as a seller so that I can sell coffee through the marketplace.	Given required data is valid, when the user performs 'register as a seller', then the system must create a seller company profile; audit/logging and localized error messages are required.	Critical	Backlog	MVP	5	
ST-0003	Admin	Admin	As a Admin, I want to create administrator so that I can delegate platform operations.	Given required data is valid, when the user performs 'create administrator', then the system must invite another administrator with role permissions; audit/logging and localized error messages are required.	Critical	Backlog	MVP	8	
ST-0004	Catalog	Content Editor	As a Content Editor, I want to create coffee bean page so that I can publish structured coffee knowledge.	Given required data is valid, when the user performs 'create coffee bean page', then the system must enter origin, region, altitude, process and tasting attributes; audit/logging and localized error messages are required.	Critical	Backlog	MVP	13	ST-0001
ST-0005	Catalog	Logistics Manager	As a Logistics Manager, I want to compare coffees so that I can choose the right product.	Given required data is valid, when the user performs 'compare coffees', then the system must compare aroma, acidity, body, sweetness and roast; audit/logging and localized error messages are required.	Critical	Backlog	MVP	2	
ST-0006	Marketplace	AI Service	As a AI Service, I want to filter products by delivery area so that I can see only available coffees.	Given required data is valid, when the user performs 'filter products by delivery area', then the system must select country, city and area; audit/logging and localized error messages are required.	Critical	Backlog	MVP	3	
ST-0007	Marketplace	SEO Manager	As a SEO Manager, I want to place an order so that I can buy premium coffee easily.	Given required data is valid, when the user performs 'place an order', then the system must pay and receive confirmation; audit/logging and localized error messages are required.	Critical	Backlog	MVP	5	
ST-0008	Seller Portal	Customer	As a Customer, I want to manage inventory so that I can avoid overselling.	Given required data is valid, when the user performs 'manage inventory', then the system must update stock and variants; audit/logging and localized error messages are required.	Critical	Backlog	MVP	8	ST-0005
ST-0009	Seller Portal	Seller	As a Seller, I want to define delivery zones so that I can control shipping availability.	Given required data is valid, when the user performs 'define delivery zones', then the system must select countries, cities and areas; audit/logging and localized error messages are required.	Critical	Backlog	MVP	13	
ST-0010	Content	Admin	As a Admin, I want to publish brewing guide so that I can educate users.	Given required data is valid, when the user performs 'publish brewing guide', then the system must add steps, video, mistakes and tips; audit/logging and localized error messages are required.	Critical	Backlog	MVP	2	
ST-0011	Community	Content Editor	As a Content Editor, I want to review coffee so that I can share tasting experience.	Given required data is valid, when the user performs 'review coffee', then the system must rate and upload photos; audit/logging and localized error messages are required.	Critical	Backlog	MVP	3	
ST-0012	AI	Logistics Manager	As a Logistics Manager, I want to get coffee recommendation so that I can discover suitable coffee.	Given required data is valid, when the user performs 'get coffee recommendation', then the system must answer taste questions; audit/logging and localized error messages are required.	Critical	Backlog	MVP	5	ST-0009
ST-0013	AI	AI Service	As a AI Service, I want to troubleshoot brewing so that I can improve coffee preparation.	Given required data is valid, when the user performs 'troubleshoot brewing', then the system must describe a brewing issue; audit/logging and localized error messages are required.	Critical	Backlog	MVP	8	
ST-0014	Mobile	SEO Manager	As a SEO Manager, I want to scan coffee barcode so that I can track coffee history.	Given required data is valid, when the user performs 'scan coffee barcode', then the system must open product or journal entry; audit/logging and localized error messages are required.	Critical	Backlog	MVP	13	
ST-0015	SEO	Customer	As a Customer, I want to generate country page so that I can capture organic traffic.	Given required data is valid, when the user performs 'generate country page', then the system must use structured template and hreflang; audit/logging and localized error messages are required.	Critical	Backlog	MVP	2	
ST-0016	Logistics	Seller	As a Seller, I want to track shipment so that I can know delivery status.	Given required data is valid, when the user performs 'track shipment', then the system must view carrier events; audit/logging and localized error messages are required.	Critical	Backlog	MVP	3	ST-0013
ST-0017	Payments	Admin	As a Admin, I want to request refund so that I can resolve purchase problem.	Given required data is valid, when the user performs 'request refund', then the system must submit refund reason; audit/logging and localized error messages are required.	Critical	Backlog	MVP	5	
ST-0018	Subscriptions	Content Editor	As a Content Editor, I want to subscribe to World Tour Box so that I can receive curated coffee monthly.	Given required data is valid, when the user performs 'subscribe to World Tour Box', then the system must choose frequency and preferences; audit/logging and localized error messages are required.	Critical	Backlog	MVP	8	
ST-0019	Courses	Logistics Manager	As a Logistics Manager, I want to complete lesson so that I can earn certificate.	Given required data is valid, when the user performs 'complete lesson', then the system must watch course content and pass quiz; audit/logging and localized error messages are required.	Critical	Backlog	MVP	13	
ST-0020	B2B	AI Service	As a AI Service, I want to request wholesale quote so that I can source coffee for business.	Given required data is valid, when the user performs 'request wholesale quote', then the system must submit volume and destination; audit/logging and localized error messages are required.	Critical	Backlog	MVP	2	ST-0017
ST-0021	Accounts	SEO Manager	As a SEO Manager, I want to register as a customer so that I can start ordering premium coffee securely.	Given required data is valid, when the user performs 'register as a customer', then the system must create an account and verify email; audit/logging and localized error messages are required.	Critical	Backlog	MVP	3	
ST-0022	Accounts	Customer	As a Customer, I want to register as a seller so that I can sell coffee through the marketplace.	Given required data is valid, when the user performs 'register as a seller', then the system must create a seller company profile; audit/logging and localized error messages are required.	Critical	Backlog	MVP	5	
ST-0023	Admin	Seller	As a Seller, I want to create administrator so that I can delegate platform operations.	Given required data is valid, when the user performs 'create administrator', then the system must invite another administrator with role permissions; audit/logging and localized error messages are required.	Critical	Backlog	MVP	8	
ST-0024	Catalog	Admin	As a Admin, I want to create coffee bean page so that I can publish structured coffee knowledge.	Given required data is valid, when the user performs 'create coffee bean page', then the system must enter origin, region, altitude, process and tasting attributes; audit/logging and localized error messages are required.	Critical	Backlog	MVP	13	ST-0021
ST-0025	Catalog	Content Editor	As a Content Editor, I want to compare coffees so that I can choose the right product.	Given required data is valid, when the user performs 'compare coffees', then the system must compare aroma, acidity, body, sweetness and roast; audit/logging and localized error messages are required.	Critical	Backlog	MVP	2	
ST-0026	Marketplace	Logistics Manager	As a Logistics Manager, I want to filter products by delivery area so that I can see only available coffees.	Given required data is valid, when the user performs 'filter products by delivery area', then the system must select country, city and area; audit/logging and localized error messages are required.	Critical	Backlog	MVP	3	
ST-0027	Marketplace	AI Service	As a AI Service, I want to place an order so that I can buy premium coffee easily.	Given required data is valid, when the user performs 'place an order', then the system must pay and receive confirmation; audit/logging and localized error messages are required.	Critical	Backlog	MVP	5	
ST-0028	Seller Portal	SEO Manager	As a SEO Manager, I want to manage inventory so that I can avoid overselling.	Given required data is valid, when the user performs 'manage inventory', then the system must update stock and variants; audit/logging and localized error messages are required.	Critical	Backlog	MVP	8	ST-0025
ST-0029	Seller Portal	Customer	As a Customer, I want to define delivery zones so that I can control shipping availability.	Given required data is valid, when the user performs 'define delivery zones', then the system must select countries, cities and areas; audit/logging and localized error messages are required.	Critical	Backlog	MVP	13	
ST-0030	Content	Seller	As a Seller, I want to publish brewing guide so that I can educate users.	Given required data is valid, when the user performs 'publish brewing guide', then the system must add steps, video, mistakes and tips; audit/logging and localized error messages are required.	Critical	Backlog	MVP	2	
ST-0031	Community	Admin	As a Admin, I want to review coffee so that I can share tasting experience.	Given required data is valid, when the user performs 'review coffee', then the system must rate and upload photos; audit/logging and localized error messages are required.	Critical	Backlog	MVP	3	
ST-0032	AI	Content Editor	As a Content Editor, I want to get coffee recommendation so that I can discover suitable coffee.	Given required data is valid, when the user performs 'get coffee recommendation', then the system must answer taste questions; audit/logging and localized error messages are required.	Critical	Backlog	MVP	5	ST-0029

ID	Epic	Role	User Story	Acceptance Criteria	Priority	Status	MVP Phase	Estimate Points	Dependencies

iCoffeeHub.com

Strategy for 100,000+ Indexed Pages

SEO and Content Strategy

Everything About Coffee. One Global Hub.

Table of Contents

1. SEO Vision
2. Content Clusters
3. Programmatic SEO Rules
4. Editorial Calendar
5. SEO KPIs

SEO Vision

Build a content and commerce platform capable of reaching 100,000+ indexed pages while preserving quality, uniqueness and structured data.

Content Clusters

500+ coffee varieties

100+ countries and regions

10,000+ coffee farms

5,000+ roasters

100,000+ cafes

2,000+ brewing guides

5,000+ equipment reviews

20,000+ coffee products

1,000+ recipes

5,000+ educational articles

Daily news and market updates

Programmatic SEO Rules

Every template must include unique origin data, photos, structured attributes and related products.

Avoid thin duplicate pages.

Use schema.org Product, Article, FAQ, Review, LocalBusiness and Breadcrumb data.

Build multilingual canonical and hreflang strategy.

Editorial Calendar

Daily: coffee news and market updates.

Weekly: brewing guides, recipes and product comparisons.

Monthly: country reports, farm profiles and roaster interviews.

SEO KPIs

Indexed pages

Organic sessions

Ranking keywords

Marketplace conversions from SEO

Seller leads from SEO

AI assistant engagement from organic users

Launch, Growth and Expansion Plan

Go-to-Market Strategy

Everything About Coffee. One Global Hub.

Table of Contents

1. Launch Strategy
2. Phase 1: Validation
3. Phase 2: Growth
4. Phase 3: Global Expansion
5. Channels

Launch Strategy

Start in selected countries/cities with high coffee interest and reliable delivery partners. Use SEO, seller acquisition, content partnerships and influencer tastings.

Phase 1: Validation

Curate 50-100 premium coffees.

Launch English and Greek first if operating from Greece, then expand languages.

Acquire initial specialty roasters and importers.

Phase 2: Growth

Scale programmatic SEO.

Introduce subscription boxes.

Launch AI taste quiz and mobile app waitlist.

Partner with baristas, coffee schools and events.

Phase 3: Global Expansion

Open seller acquisition by country.

Launch local delivery zones.

Add B2B sourcing and trade workflows.

Channels

SEO

Social media

YouTube brewing content

Coffee influencers

Email newsletters

Affiliate equipment guides

Events and competitions

Partnerships with roasters and cafes

iCoffeeHub.com - 5-Year Financial Model

Print-optimized PDF representation of the financial workbook.

Assumptions & Inputs

iCoffeeHub.com

Everything About Coffee. One Global Hub.

Problem

Coffee is global, but discovery and trust are fragmented.

- Information is scattered across blogs, shops and marketplaces.
- Premium origin data is difficult for normal consumers to understand.
- Small roasters and farms lack direct global visibility.
- Delivery availability is often unclear until checkout.

Market gap

No dominant global platform combines coffee knowledge, premium commerce, AI guidance, origin transparency, seller tools and local delivery logic.

Solution

A complete coffee ecosystem.

Learn

Discover

Order

Review

Subscribe

Personalize

- Coffee encyclopedia, countries, farms, roasters, shops and recipes.
- Marketplace for premium coffee and equipment.
- AI assistant for recommendations and brewing troubleshooting.

Product Pillars

Content, commerce, community and AI reinforce each other.

Encyclopedia

Coffee history, varieties, countries, farms and brewing guides.

Marketplace

Premium coffee, subscriptions, equipment and gifts.

Seller Portal

Provider onboarding, products, stock, zones and analytics.

AI Assistant

Taste matching, grinder advice and brewing help.

Community

Reviews, collections, profiles and journals.

Mobile App

Scanner, brewing timer and offline journal.

Business Model

Multiple monetization streams.

- Marketplace commission on coffee and equipment sales.
- Seller subscriptions and featured listings.
- Premium customer memberships and subscription boxes.
- Courses, certificates, ads, affiliates and B2B sourcing fees.

Long-term upside

The content layer drives SEO demand. The marketplace monetizes intent. The AI layer improves conversion and retention.

Account Model

Three account types with clear permissions.

Admin

Created only by another admin. Manages users, sellers, content, orders, payments, moderation, analytics and configuration.

Seller / Provider

Self-registers on seller subdomain or is created by admin. Manages products, inventory, shipping zones, orders and analytics.

Customer

Registers on site/app, orders premium coffee by delivery area, reviews, subscribes and uses AI recommendations.

SEO Engine

Designed for 100,000+ high-quality indexed pages.

- 500+ coffee varieties and 100+ countries/regions.
- 10,000+ farms, 5,000+ roasters and 100,000+ cafes.
- 2,000+ brewing guides, 5,000+ equipment reviews and 1,000+ recipes.
- 20,000+ product pages plus daily news and market updates.

Go-to-Market

Start curated, then scale through content and sellers.

Phase 1

Launch with curated premium coffees, core marketplace, English/Greek content, trusted sellers and SEO foundation.

Phase 2

Scale guides, country pages, reviews, AI taste quiz, subscriptions and partnerships with baristas/roasters.

Phase 3

Global seller onboarding, delivery zones, mobile app, B2B sourcing and API/data products.

Financial Logic

Marketplace revenue compounds with content and retention.

- Revenue streams diversify beyond transaction fees.
- Subscription boxes improve predictability.
- Seller subscriptions monetize supply-side tools.
- SEO reduces dependence on paid acquisition over time.

5-year model

Base case reaches profitability after marketplace scale, repeat purchasing and marketing efficiency improve.

Technology

Built for scale, localization and AI.

- Next.js/React front end with multilingual SEO.
- Backend microservices: identity, catalog, orders, sellers, content, AI, logistics and payments.
- PostgreSQL, OpenSearch, Redis and object storage/CDN.
- LLM grounded in verified content and catalog data.

Roadmap

From MVP to global coffee graph.

- MVP: accounts, catalog, seller portal, admin portal, checkout and delivery zones.
- Phase 2: encyclopedia, reviews, subscriptions, AI assistant and multilingual content.
- Phase 3: mobile app, logistics integrations, B2B sourcing and courses.
- Phase 4: API, data products, global coffee graph and enterprise partnerships.

Investment Ask

Funding accelerates supply, technology and SEO scale.

- Build the MVP and seller portal.
- Acquire curated sellers and premium coffee inventory.
- Produce multilingual content at scale.
- Launch AI personalization and mobile app.
- Create a trusted global coffee destination.

Thank you

Country, City and Area Delivery Model

Logistics and International Shipping Architecture

Everything About Coffee. One Global Hub.

Table of Contents

1. Logistics Vision
2. Delivery Architecture
3. International Shipping
4. Freshness Rules
5. Carrier Integration

Logistics Vision

Enable customers to order premium coffee based on selected country, city and area while sellers define feasible shipping zones and rates.

Delivery Architecture

Delivery countries

Delivery areas

Carrier rates

Seller warehouses

Order routing

Tracking events

Returns and refunds

International Shipping

Customs data

HS codes

Duties and taxes

Restricted countries

Cold/warm storage not usually required but freshness and packaging matter.

Freshness Rules

Display roast date.

Warn if delivery estimate conflicts with freshness target.

Support pre-order and roast-to-order workflows.

Carrier Integration

Manual rates for MVP.

Carrier API integrations in Phase 2.

Shipping aggregators in Phase 3.
